

## DevOps Engineer (m/w/d) in Munich

We are **innoscripta**, an innovative company from **Munich, Germany**. We scout bright ideas and transform them into high-end projects. We look for scientific breakthroughs and help turning them into reality. We are entrepreneurs with passion for science and modern technologies.

Our core business model can be briefly described as follows: we connect researchers from scientific communities all over Germany with those companies and enterprises, that are in need of cost-saving modern technologies. **Since 2012** we have completed **more than 2000 projects** in various fields and expanded from 1-person company to a full-scale innovative machine with more than **100 employees**, including **20 developers**.

In the past we developed several complex software projects from start to the end. We created our own **CRM**, a **billing tool**, a **mass marketing tool**, a **CMS**, a **customer portal** and other business related software. Now as we want to start a new big project, which is about machine based understanding of companies, we are eager to get new talented developers and expand our international team.

We are looking for **open-minded and passionate people** (with various experience or qualification), who are willing to invest their efforts into professional and personal development.

Salary depends on test results and always is a subject for revision due to solid performance.

### Tasks

- Design and implement a Kubernetes based solution to unify different environments;
- Manage and evolve our continuous deployment pipeline;
- Application monitoring, log collection, and analysis;
- Maintain and improve our backup and disaster recovery processes;
- Assess our application infrastructure w.r.t. security and performance;
- Identify and implement cost optimization strategies in our cloud infrastructure;
- Grow into a lead role in our DevOps team;

### Knowledge and skills:

- Fluent in Business English;
- AWS Cloud Provider;
- Kubernetes;
- Linux servers;
- Experience with CI/CD Pipelines and tools (gitlab-ci is a plus);
- Master at least one programming language (PHP is a plus);
- Experience developing scripts for automation.
